

SYSTEM ARCHITECTURE DIAGRAM

- System architecture design

❖ **Modules & Features**

1. **User Interface:**

Starts as a simple text-based chatbot for user queries

2. **NLP & Bot Engine:**

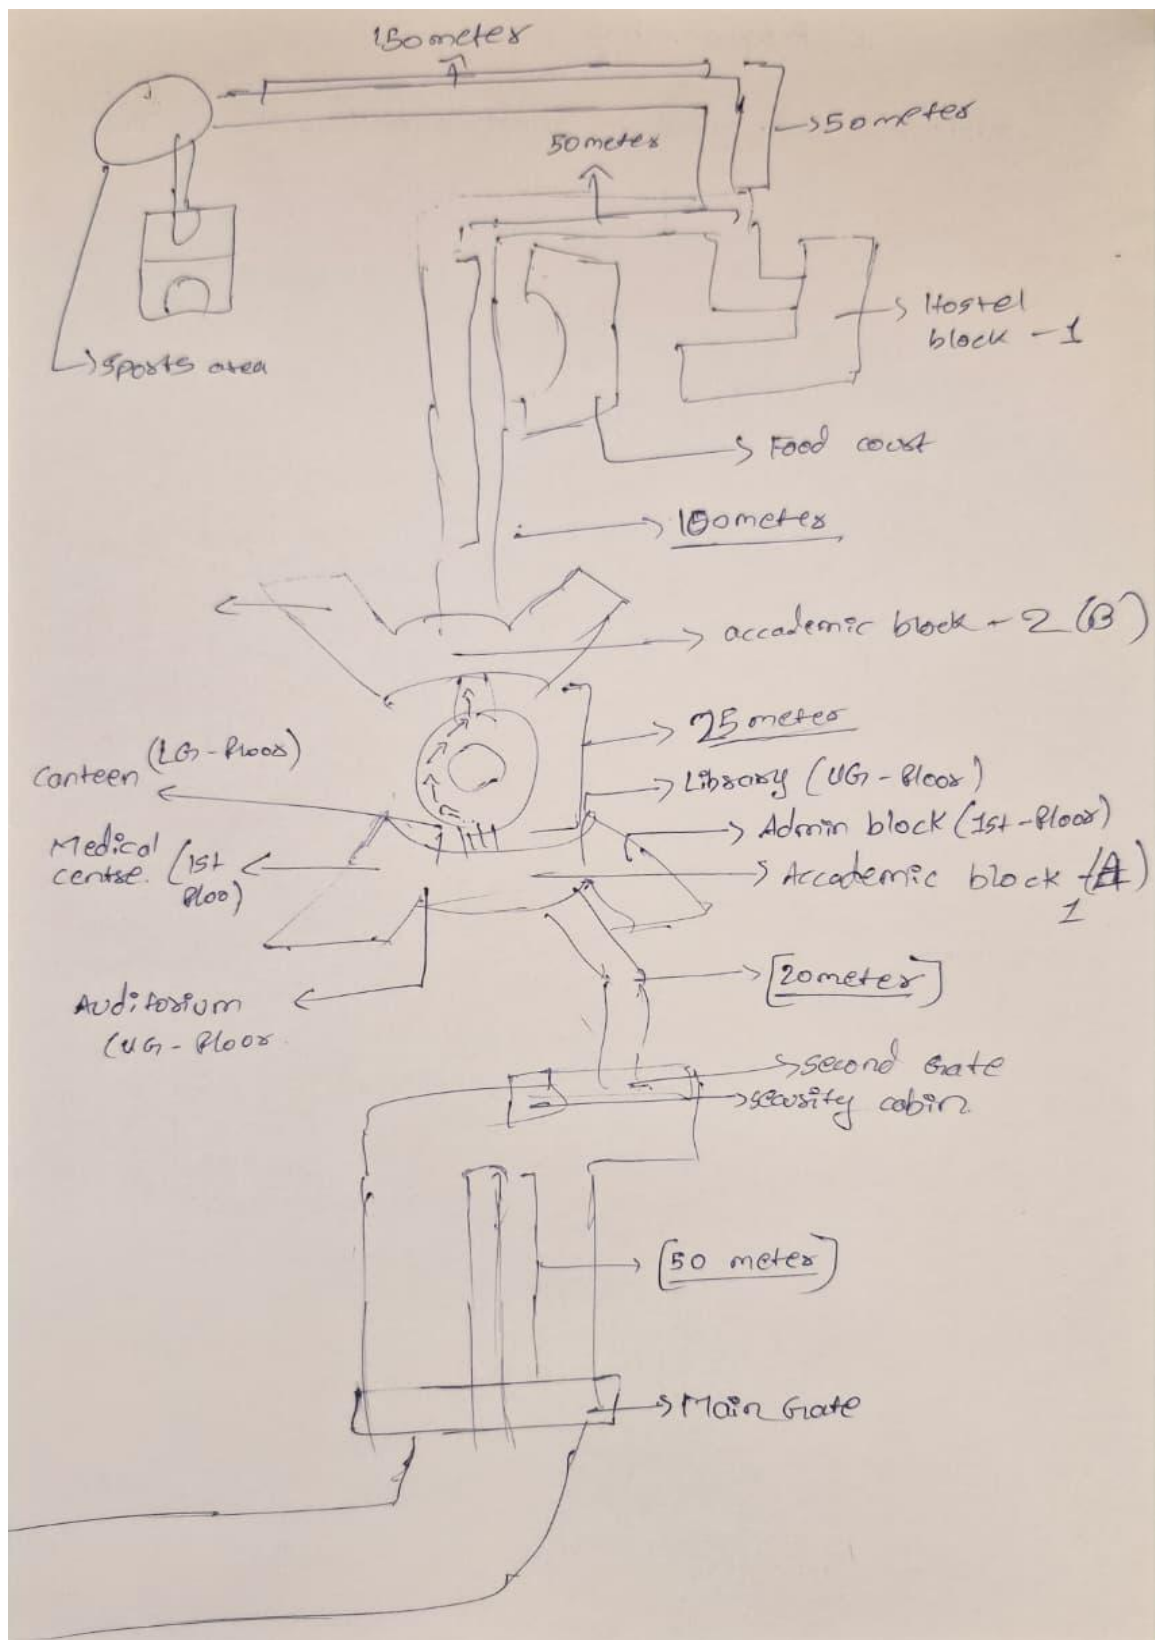

Understands user inputs by extracting key details and identifying user intent such as navigation or FAQs.

3. **Navigation & Pathfinding:**

Uses search algorithms (BFS, DFS, UCS, A*) on a weighted campus graph to provide the best routes, distances, and walking times.

4. **Database:**

Stores campus locations, staff contacts, event details, and FAQs to support accurate responses and navigation.
